

CLP regulation

The Classification, Labelling and Packaging (CLP) Regulation ((EC) No 1272/2008) is based on the United Nations' Globally Harmonised System (GHS) and its purpose is to ensure a high level of protection of health and the environment, as well as the free movement of substances, mixtures, and articles.

The CLP Regulation amended the Dangerous Substances Directive (67/548/EEC (DSD)), the Dangerous Preparations Directive (1999/45/EC (DPD)) and Regulation (EC) No 1907/2006 (REACH). Since 1st June 2015, CLP is the only legislation in force in the EU for classification and labelling of substances and mixtures.

In accordance with REACH and CLP regulations, products manufactured by SPT Roth Ltd. are mixtures.

According to CLP regulation, a material can be classified based on its constituent's classification.

SPT Roth Ltd. considers that none of our ceramic products are classified as dangerous.

Following REACH regulation, SPT Roth Ltd. will not systematically provide a Safety Data Sheet to its customers, but on request. SDS and exposure scenarios are available and will be communicated on request.
